---

## Resolved bugs and hot fixes

Bugs resolved and deployed to live in releases 1.7.1 – 1.9 between June – September 2016

#6184 - Pagination on See all notification doesn't work  
#6178 - export in TWN breaks randomly  
#6169 - Load more comments for quick post not working  
#6114 - Groups should not have Filter by tags section on list page  
#6061 - Edited answer doesn't appear without reload  
#6043 - Reduce max height for instance drop down  
#6030 - There are no local settings for user which is member only of groups, but not member of communities or network  
#6015 - notification list page does not update automatically when new notifications arrive  
#5973 - When no photo on the user's profile, the top icon for the profile is not visible enough  
#5872 - Red notification number keeps reappearing although I have read all notifications  
#5854 - Change mentions dropdown to show only 5 results  
#5758 - Custom feature name is not propagated to (instant email) notifications  
#6209 - Member count broken  
#6201 - User gets email notifications for mentions on unpublished question  
#6185 - Content types using singular title  
#6139 - SMP switch for mosaic fixed
